

# Colour Match - Solution

## Faculty: Health

Begin by identifying the colour codes for each speech bubble.

When each pair is looked at for common ground, we discover that the first pair share the same red value (FF), the second pair share the same green value (FA), and the third pair share the same blue value (CD). This gives us a new colour code: #FFFACD. After a little bit of googling we learn that this colour code has a special name.

**ANSWER: LEMON CHIFFON**

### Author Notes:

The original idea for this puzzle involved the characters shouting out colour names such as “Misty Rose” and “Blanched Almond”. However, there is a limited set of well defined colour names and the codes were not working out well. So we pivoted and filled the speech bubbles with actual colours instead of words which gave us much more flexibility.
